Instructor: Dr. Antoinette Nammour
Course: Studio 2
Project 3 – Lebanese Residential House
Fall 2022-2023

- LOCATION: CHEMLAN MOUNT-LEBANON
- CLIENT NAME : ELIE SAAB
- CLIENT PROFILE : FASHION DESIGNER

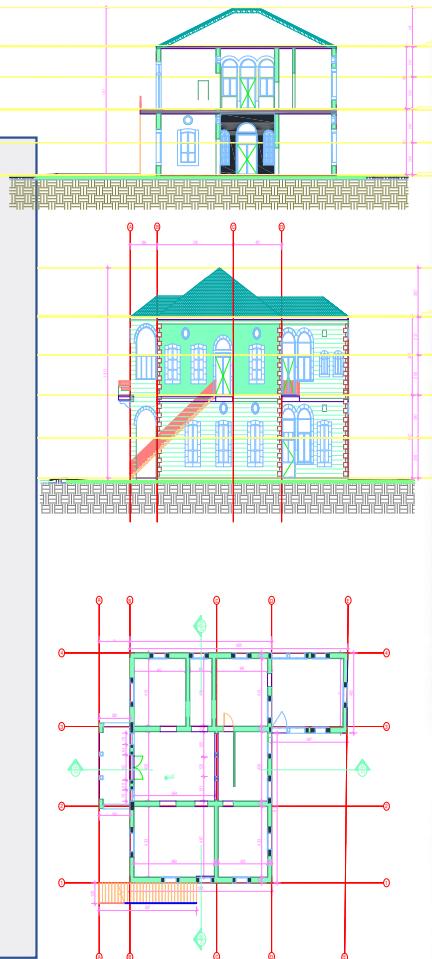

I chose the merging to be as concept because Saab is famous for his delicate touches by merging fabrics with diamond cuts and accessories, and he added his own touch to fashion by integrating his drawings and ideas into his designs.

ELIE Saab was a fan of fashion and fashion, so he established a fashion house for himself, and he is one of the world's designers. So he drew, knitted, and sewed in a unique way, and he combined fabric and accessories of all kinds, so he added a special character to fashion.

HOUSE ANALYSIS

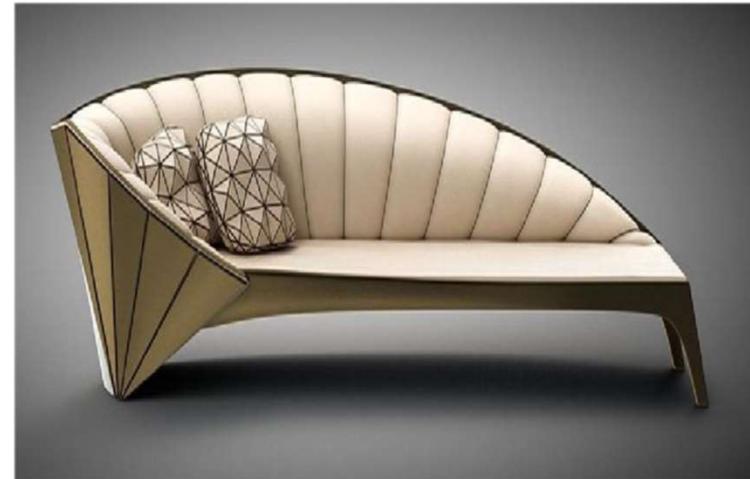

➤ THE TYPOLOGY OF THIS HOUSE : **IS THE CENTRAL HALL HOUSE** As its name suggests, this architecture typology is a combination of a central space surrounded by a set of other rooms. TO RENOVATE THIS TYPE OF HOUSE You cannot **remove the double arches**, and you **cannot remove the external staircase** and **the external and internal walls**. You can open small holes in the wall, but you cannot remove the wall completely. You can rehabilitate the tiles in a new way while preserving the old character. The furnishings can be changed in a manner commensurate with the renovation of the house.

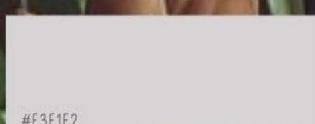

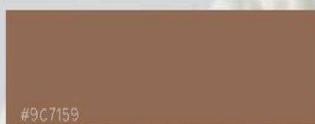

FIXED ELEMENTS

LOSS ELEMENT

COLOR PALETTE

MATERIALS USED

MOSAIC : Mosaic flooring comprises little squares of stone, marble, or glass that are placed together in different designs. The tiles are then bound together with cement or grout to hold the pattern in place. I will combine, with minor modifications, the mosaics that have been in the house since ancient times, with ceramics, to give a modern feel.

STONE : A solid made up of the mineral substance that rocks are made of. A piece of rock hewn and worked to a specific size and shape for a specific purpose: paving stone.

Thank you
